parameterizing the soil information
Posted by astute - 2008/08/05 14:24

_____

Helo eveybody
Iam chrishy and new to AGWA
Could any one tell me how to apply AGWA Kineros to an Indian watershed.especially how to create the
soils file in AGWA acceptable format.
For example i am attaching the soil file of mine study area could any one tell me what should i do to use
this soil information for AGWA Kineros simulation.

Kindly help me
 http://www.tucson.ars.ag.gov/agwa/images/fbfiles/files/soil.zip
Thanks in advance

_____

AGWA does not support custom soil maps or databases. You should download the FAO soils map for
your region and use that. If you are determined to use your own soils map, it must be a shapefile/feature
class and not a raster. For more information, see this thread.
